

Android Library Developer

About Apptimize:

Located in Silicon Valley, Apptimize is revolutionizing mobile apps by letting app owners customize apps live, with zero coding and no re-deployment. We provide an end-to-end solution for mobile product managers and app owners to edit any element of an app and evaluate its effectiveness through A/B testing. A Y Combinator startup, our investors include Google Ventures, Merus Capital and other top investors. Founded in 2013, our small team includes 6 MIT alumni, 3 ex-Google, 1 Wharton MBA, 1 MIT Masters in CS, 1 CMU CS alum, and 1 "20 under 20" Thiel fellow. Candidates often remark we're the strongest team they've ever seen: <http://apptimize.com/company/team/>.

Our mission is to raise the bar when it comes to the mobile experience and invent technologies critical to every app.

About the Role:

If an Android app developer is like an interior designer, you're the person who goes in and rips open the walls to install a state of the art security system.

Extreme attention to detail is critical because you're working on code that'll be deployed to billions of app installs. Applicants should be excited to explore the Android source code to find answers.

You will be working with engineers who've invented tools used by tens of millions of developers around the world. You will not hesitate to dig in and figure things out. You enjoy reverse engineering.

To apply:

Email jobs@apptimize.com with a description of your last project. This is for a full time role at our office in Menlo Park.
