

iOS Library Developer

About Apptimize:

Located in Silicon Valley, Apptimize is revolutionizing mobile apps by letting app owners customize apps live, with zero coding and no re-deployment. We provide an end-to-end solution for mobile product managers and app owners to edit any element of an app and evaluate its effectiveness through A/B testing. A Y Combinator startup, our investors include Google Ventures, Merus Capital and other top investors. Founded in 2013, our small team includes 6 MIT alumni, 3 ex-Google, 1 Wharton MBA, 1 MIT Masters in CS, 1 CMU CS alum, and 1 "20 under 20" Thiel fellow. Candidates often remark we're the strongest team they've ever seen: <http://apptimize.com/company/team/>.

Our mission is to raise the bar when it comes to the mobile experience and invent technologies critical to every app.

About the Role:

If an iOS app developer is like an interior designer, you're the person who goes in and rips open the walls to install a state of the art security system.

While we play by the rules, we're often working on the less documented, adventurous parts of iOS. Be prepared to be a master of the dark corners of Objective C.

You will be working with engineers who've single handedly invented tools used by tens of millions of developers around the world. You will not hesitate to dig in and figure things out. You enjoy reverse engineering and have a sense for good design.

Your work on our iOS SDK will be installed on billions of app installs and have a direct impact on revenue, so it needs to do no harm. You care about the details.

To apply:

Email jobs@apptimize.com with a description of your last project. This is for a full time role at our office in Menlo Park.
