**APPTIMIZE**

# Backend Developer

**About Apptimize:**

Located in Silicon Valley, Apptimize is revolutionizing mobile apps by letting app owners customize apps live, with zero coding and no re-deployment. We provide an end-to-end solution for mobile product managers and app owners to edit any element of an app and evaluate its effectiveness though A/B testing. A Y Combinator startup, our investors include Google Ventures, Merus Capital and other top investors. Founded in 2013, our small team includes 6 MIT alumni, 3 ex-Googlers, 1 Wharton MBA, 1 MIT Masters in CS, 1 CMU CS alum, and 1 "20 under 20" Thiel fellow. Candidates often remark we're the strongest team they've ever seen: http://apptimize.com/company/team/.

Our mission is to raise the bar when it comes to the mobile experience and invent technologies critical to every app.

**About the Role:**

We process millions of events per second per server. The load fluctuates wildly throughout the day and can suddenly increase permanently when a new user deploys our SDK. We want your help to scale. We use Postgres, Java, and AWS in the back and our infrastructure is cutting edge.

**To apply:**

Email jobs@apptimize.com with a description of your last project. This is for a full time role at our office in Menlo Park.
